

Corporate Profile

Founded in 2008, Ebryx started as a custom engineering services company helping Silicon Valley tech start-ups develop products. A network security unicorn became one of our earliest clients when it was a year old. More than a decade later, we count many leading cybersecurity tech companies among our cybersecurity R&D services customers.

In 2014, we broadened into cybersecurity consulting and managed security services and are a leading service provider to organizations from SMEs to Fortune 500 companies.

In addition to our commercial customers, we also offer indigenous cybersecurity technology and capacity development services to nations seeking to enhance their national cyber power and cybersecurity technology independence.

Our Zero Trust Network Access (ZTNA) solution, Invisily, serves as a pivotal technology for organizations aiming to integrate zero trust security principles and attain essential cyber hygiene, in alignment with CIS IG1 standards.

Through our Ebryx Technologies division, we provide custom engineering services in domains ranging from hardware and embedded systems to cloud applications. Our customers include B2B SaaS companies spanning the fintech, health-tech, transportation and logistics verticals and more.

Our customer base and physical presence spans North America, EMEA and APAC regions bringing a global talent pool to bear on achieving our clients' missions. We are a CMMI Level 3 and ISO 27001 certified company.

CYBERSECURITY SERVICES

We are a one-stop shop for tech startups and SMEs for their cybersecurity needs. For large enterprises, we provide specialized services and augment their staff. We help cybersecurity tech companies innovate and stand out against their competition. Our services include:

Security Assessments

Pen-testing, red-teaming, compromise assessments, incident readiness assessments, security architecture assessments, Zero Trust Architecture maturity assessments and creation of ZTNA roadmaps.

Research and Development

Development and testing for malware detection, insider threat detection, threat intelligence and security analytics are some examples of our R&D work. We have generated several patents for our clients.

GRC Services

Achieving compliance with most of the major compliance regimes including SOC 2, HIPAA, HITRUST, PCI DSS, ISO 27001, GDPR, FFIEC among others.

Application Security Services

Threat modelling, SAST, DevSecOps and embedding zero trust.

Managed Security Services

Managed SOC, SIEM, EDR, ZTNA, DLP, Backup; DFIR and Vulnerability Management.

Security Solutions

ZTNA, NAC, Micro-segmentation, DLP, email security, PAM, IGAM and more.

EBRYX TECHNOLOGIES: OUR CUSTOM ENGINEERING DIVISION

Our engineering talent has fueled innovation at leading start-ups and Fortune 500 companies. Our ability to take on challenging assignments, the quality of our engineers and a high level of commitment are our hallmarks. Our skills span hardware and embedded systems, mobile, web, desktop, network, cloud media processing, Big Data, AI/ML and positioning technologies.
